

Vaishnavi Thottupurath Vasu

Work permit: French | **Date of birth:** 15/08/1994 | **Nationality:** Indian | **Phone number:**

(+91) 9048045015 (Mobile) | **Email address:** vaishnavivaishu115@gmail.com | **LinkedIn:** [Select an option](#) |

Address: Thottupurath house, 680665, Kodungallur, India (Home)

● ABOUT ME

QA Automation Engineer with 8+ years of experience designing and implementing automation frameworks for web, API, and performance testing. Starting an MSc Cybersecurity at ECE Engineering School (École d'Ingénieurs), Paris with a focus on application security, DevSecOps, secure software development, and cloud security. Seeking a part-time QA Automation, Software Testing, or Cybersecurity Internship in Paris.

● WORK EXPERIENCE

AUTOMATION ENGINEER – OXFAM GB – 28/11/2022 – 17/10/2025 – OXFORD, UNITED KINGDOM

Directed complete test strategy, planning, and execution across UI, API, and database layers, ensuring release readiness and enforcing quality gates.

Translated business and functional specifications into risk-based test strategies, BDD scenarios, and executable acceptance criteria aligned with Agile delivery.

Developed and scaled automation frameworks using Selenium (C#), Rest Assured (Java), and Postman, applying Page Object Model and modular design principles.

Integrated test automation into Azure DevOps pipelines (pull request and nightly builds), ensuring seamless CI/CD integration and early defect detection.

Optimized UI and API regression suites, reducing manual regression time from 3 weeks to 2 days and eliminating flaky tests through code reviews and root cause analysis.

Implemented performance testing with JMeter, profiling DB/CPU usage to tune connection pools; achieved p95 ≤ 300ms and under 60-user load.

Led incident triage and problem management in ServiceNow, maintaining >95% SLA compliance for P2/P3 incidents.

Monitored and reported QA metrics (pass rate, defect leakage, execution duration) to stakeholders to ensure transparency and accountability.

Collaborated daily with developers, product owners, business analysts, and support teams to uphold product quality and maintain delivery alignment.

Validated backend data integrity using **Oracle and SQL Server**, and regression test flow

Managed version control with Git/Azure Repos, enforcing code review discipline and maintaining branch quality.

Key Achievements

Cycle Time: Accelerated release cadence by approximately 90% via CI-integrated automation and early test execution.

Early Risk Discovery: Detected EPOS till blockers three sprints earlier through targeted UI/API automation.

Reliability: Stabilized nightly and PR pipelines through systematic framework refactoring and standardized review checklists.

Performance Optimization: Sustained 32 requests per second throughput with tuned DB and Redis pools; maintained under load.

Operational Excellence: Directed major incident bridges from Incident → Problem → Change, producing post-incident root cause analyses.

Efficiency: Negotiated vendor contract improvements to add +2 parallel CI threads at no additional cost, removing PR queue bottlenecks.

Knowledge Sharing: Conducted automation workshops, demos, and strategy sessions across teams to promote best practices.

Recognition: Awarded “*Superstar of the Week*” for developing volume-testing automation that uncovered duplicate transaction records.

TEST ENGINEER – COGNIZANT TECHNOLOGY SOLUTIONS – 22/06/2015 – 18/08/2021 – CHENNAI, INDIA

• Built and maintained hybrid automation frameworks in Selenium (Java & .NET) and UFT, applying Page Object Model (POM), data-driven, and modular patterns to maximize maintainability and code reuse.

- Developed and executed automated regression and functional test suites covering UI, API, and database layers, integrated with Jenkins and Azure DevOps for continuous integration and delivery (CI/CD).
- Integrated SQL validation for Oracle and SQL Server backends; implemented stored procedure-based and query-based consistency checks for end-to-end data verification.
- Created and maintained comprehensive test documentation – test plans, test cases, run logs, and defect metrics–ensuring traceability through HP ALM and Jira.
- Performed API validation using SoapUI, later extending coverage via Rest Assured to support automated API regression.
- Improved execution throughput by optimizing element locators, introducing parallel execution with TestNG, and implementing thread-safe WebDriver management.
- Executed cross-browser and cross-device testing to ensure UI consistency and compatibility across diverse environments.
- Documented automation framework architecture, onboarding guides, and contribution standards to streamline team ramp-up and knowledge transfer. Led QA participation in Agile sprints: provided test input during story pointing, risk-based scoping, and automation candidate selection; ensured QA deliverables were included in the sprint backlog with clear acceptance criteria.
- Drove QA ownership of Scrum and STLC activities – stand-ups, planning, reviews, and retrospectives – maintaining accountability for test design, readiness, and sign-off gates.
- Automated ~800 UI test cases, achieving >95% regression pass rate across key application modules.
- Framework Efficiency: Delivered a scalable automation framework supporting UI, API, and DB validation with CI/CD integration.
- Execution Speed: Reduced regression cycle time through parallel execution and optimized locator strategy.
- Quality Assurance: Achieved and maintained >95% test pass rate across all major releases.
- Documentation & Enablement: Authored framework architecture documents, onboarding guides, and coding standards adopted team-wide.
- Agile Integration: Institutionalized QA in sprint ceremonies, enabling predictable release quality and consistent stakeholder alignment.

● HOBBIES AND INTERESTS

Travelling

Write here the description...

Cooking

● EDUCATION AND TRAINING

03/2012 – 04/2015

BACHELOR IN COMPUTER APPLICATIONS Amrita School of Arts and Sciences

Field of study Information and Communication Technologies

● SKILLS

Java (computer programming) | Atlassian tools (Jira, Confluence, Bitbucket) | Version Control (Git) | Experience in automation testing tools such as Selenium, BDD, Cucumber, TestNG, WebDriver, Maven. | Data Science: Python (requests, selenium, BeautifulSoup, pandas, matplotlib, seaborn, sklearn) | Python (computer programming)
